## **DETAILED ACTION**

### **Note the subsequent election of species requirement**

#### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-20, 39-80, 93-119 drawn to a method, classified in class 438, subclass 151.
- II. Claims 21-38, 81-92, 120-143 drawn to an apparatus, classified in class 118, subclass 722.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the etching may be performed by either isotropic or anisotropic methods.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II and vice versa, restriction for examination purposes as indicated is proper.

This application contains claims directed to the following patentably distinct species of the claimed invention:

Art Unit: 2813

Group I:

Species 1, claims 1-20, pertaining to a method including a process gas comprising B-diketone etch reactant;

Species 2, claims 39-58, pertaining to a method including exposing a layer to a reactant and a hyperthermal beam of neutral atoms;

Species 3, claims 59-74, including a method by reacting an etch reactant with the modified high permittivity layer;

Species 4, claims 75-80, including exposing a layer to a hyperthermal beam of neutral atoms;

Species 5, claims 93-119, including modifying a layer by exposing the layer to a first gas and etching in the absence of plasma by exposing the layer to a second gas;

GROUP II:

Species 1, claims 21-38, pertaining to a system with a gas injection system to inject a process gas comprising B-diketone etch reactant;

Species 2, claims 81-92, pertaining to a system comprising a source for a hyperthermal beam of neutral ions;

Species 3, claims 120-123, pertaining to a system comprising a substrate holder configured to expose the substrate to a first and second process gas ;

Species 4, claims 124-143, pertaining to a system comprising two separate substrate holders.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, there is no generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 2813

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Laura M Schillinger whose telephone number is (571) 272-1697. The examiner can normally be reached on M-T, R-F 7:00-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Carl W Whitehead, Jr. can be reached on (571) 272-1702. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
